

ROOT CAUSE ANALYSIS COURSE

FROM ASKING 'WHO' TO ANSWERING 'WHY'

Why us?

If you work in aviation, you have heard about Swiss cheese and safety models. But if that is all you remember, or you want to really understand what lies beyond and want to streamline your methods, it might be time for an update on your knowledge and skills.

We offer a training (classroom or virtual) on root cause analysis that is packed with experience and practical elements that will get you started and motivated.

**ROOT
CAUSE
ANALYSIS**

We are proud to be a bit different, like you. And we feel confident in doing so because of our valued experience.

We do not boost our knowledge, but simply listen to what you want and translate this into a bespoke offer, tailored for your organisation and its size. Honest, clear and pragmatic advice in aviation.

We would like to show you the changes we contributed to face to face. Feel free to reach out to us to discuss options.

Safety doesn't happen by accident, it is carefully crafted.

Quick info

Course topics

- Group Exercises
- Investigation Techniques
- Fundamentals of Root Cause Analysis
- Essence of non-punitive cultures
- Causal Mapping methods
- Drill down Techniques
- Investigation on 'Procedure not followed'
- How to investigate the potential for incidents

Target Audience

This interactive and practical course is specifically designed for airline, maintenance and airport staff involved in decision making and/or training positions. Please note that your Aviation Authority might have specific requirements in place for HF trainer qualification.

Investment

- 3 days theoretical Training
- Tailored price to your organisation
- Maximum 15 course participants

We take participants through a well-structured course dealing with the principles of Root Cause Analysis in a fun and active manner.

All elements of Root Cause Analysis are covered via role plays, group discussions, exercises and a few thought provoking scenarios. This includes a variety of specific experiential learning exercises designed.

The exercises are exclusive to this training and have been developed to help your staff achieve a higher level of activity and facilitation in the classroom.

The RCA training fully complies with all regulatory bodies; EASA and ICAO and is suitable for participants from both civil and military aviation organisations.

We understand that you may be looking for a course which is shorter in duration. That is why we design and deliver bespoke courses designed for one or two days.

We can create a course designed specifically to your needs. This includes any specific topics or problem areas you may wish to have covered.

Our goal is to always provide new, exciting angles and insights for your staff. Our material is first and foremost different. It has been designed specifically to introduce new ways of dealing with known RCA topics. This has more benefits: our exercises and eye openers help the trainer or instructor heighten the level of facilitation in the classroom. They always help hammer home the learning points and they will at once engage students and encourage reflection.
